

Polish data policy (and other comments)

Juliusz Gajewski

Maritime Institute in Gdańsk

Hamburg, 16th of October 2013

Top-down approach – INSPIRE case

- INSPIRE Directive is implemented into Polish law
- Spatial Data Infrastructure Council created
- Geodetic and Cartographic Agency responsible for all INSPIRE-related services „channelling”
- Leaders for different themes have been nominated
- Minister responsible for maritime economy „awarded” for some themes
- Some sea-related themes maintained by other ministers

- geoportal.gov.pl
- Ready to serve both INSPIRE and non-INSPIRE geodata
- Ready to „channel” both INSPIRE and non-INSPIRE geodata services

The screenshot shows the website interface for geoportal.gov.pl. The main content area is titled 'LIST OF OGC SERVICES' and lists various services compliant with OGC standards. The services listed include:

- General Geographic Database - RASTER
- General Geographic Database - VECTOR
- Transport Networks BDT (Topographic Data Base)
- Buildings and address point of BDOT 2009
- Buildings and address point of BDOT 2010
- The cadastral data
- Orthophotomap
- Geodetic, magnetic, gravimetric, network points
- State Boundary Register
- State Register of Geographical Names
- Map of unemployment from Central Statistical Office
- Hydrographic map
- Sozological map
- ASG-EUPOS Stations

On the right side of the page, there are several utility buttons: MAPS, GEOPORTAL2 MAPS, METADATA CATALOGUE, ERROR REPORT, FREQUENTLY ASKED QUESTIONS, INDEX OF MAPS, and GUESTS ONLINE (showing 8 guests and 1 member online).

Top-down approach – INSPIRE case

Połącz

Top-down approach – INSPIRE case

- Implementation schedule synchronised with latest dates in INSPIRE Directive – risk of delays
- Web Catalogue expected in December 2013
- Built only on existing datasets – thus in limited relevance for sea
- Focusing only on legally enforced registers – limited scope of the data – a lot of datasets held outside of those ones
- Non-resolved issues of access to real data – access regulated in number of different acts/orders, partially allowing for remuneration
- No „incentives” for becoming third party in the INSPIRE Directive sense
- Driver for sea layers required

Bottom-up approach – NODC case

- Movement of non-enforced legally data registers owners
- Mostly research institutes at the moment
- Actions towards National Oceanographic Data Committee creation
- INSPIRE compliant, but outside of the INSPIRE framework
- To be connected to Polish Geoportal as national datasets
- More live data exchange already occurring
- Focused on free access to data

- EMODNET does need guidance on what can be delivered for MSP purposes
- Probably data products should be used out of the EMODNET data but
- Transparency of analysis and data products development methods should be requested
- EMODNET Sea Uses contract should be monitored and inspected for the suitability for MSP
